

Business Proposal

Xibalba Solutions (v8.0): Dominating the AI Trust Economy

Founder: Solo Architect & Strategic Lead

Date: April 2026

1. The Value Proposition: Solving the \$1.5T Trust Gap

By 2028, autonomous agents will initiate trillions in commerce. Currently, there is **zero** standard for verifying their reliability. **Xibalba Solutions** is building the "Credit Bureau" for this new era. Our product is not an agent; it is the **Actuarial Feed** that makes agents insurable and trustworthy.

2. Revenue Engine: The "Sovereign Tax"

Our business model is lean, automated, and built for exponential scale.

STREAM	MECHANICS	YEAR 1 TARGET
Protocol Verification Fee	0.5% tax on all \$INTG\$ transactions. 50/50 Revenue-Burn split.	\$450k (Fees)
Tiered Audit Subscriptions	Platinum status (1,000 INTG/yr) for enterprise agents.	\$300k (Audits)
Actuarial API (SaaS)	Licensing our Tri-Metric data to 5 major AI insurers.	\$1.2M (SaaS)
Dispute Resolution	Automated slashing fees + manual arbitration (500 INTG).	\$150k (Disputes)

3. Competitive Moat: The "Black Box" Data Advantage

1. **Technical Moat:** Our **Entropy-Stability** math is difficult to replicate without a deep physics/information theory background.
2. **Data Moat:** By being the first to ingest **Dual-Witness** metadata, we build the world's largest dataset of "How AI Agents Fail." This data is the "Gold Standard" for insurance underwriters.
3. **Economic Moat:** The **INTG Burn Rate** ensures that as the protocol succeeds, the asset becomes scarcer, rewarding early founders and partners.

4. Execution Strategy: The Solo-Alpha Sprint (12 Months)

Months 1-3: The Proof of Concept (Math First)

- Finalize the **v8.0 Scoring Engine** logic.
- Launch the **INTG Token** on Base (L2) to minimize friction.
- Build the **OpenAI SDK Interceptor** to begin "tapping" metadata.

Months 4-8: The "Insurance Alpha"

- Pilot our **Risk API** with 3 boutique AI insurance firms.
- Use their feedback to tune our **Slashing Penalty (\$P_s\$)** weights.
- Release the **Public Reputation Explorer** UI.

Months 9-12: The Network Effect

- Partner with a major agent framework (AutoGPT/LangChain) to make Xibalba the default reputation layer.
 - Raise a **\$2.5M Seed Round** based on the data moat and revenue waterfall.
-
